Scabies Response	<ul style="list-style-type: none"> Scabies Key Messages (here)
AWD/Cholera Response	<ul style="list-style-type: none"> Multisectoral AWD response Plan (WASH and Health) Joint Assessment Team (JAT) for AWD/Cholera response became Joint Assessment and Response Team (JART) to focus on response and simplification of tool Step by Step Guidance on JART After repeated review and consultation, latest version was updated on February 2023. Final JART Form KOBO ID Creation Guidance (here) WHO-JART Training (here) participants from both Health and WASH Reinforcing water quality test for JART response in Host (here) JART Responsibility delegation in Host Community (here) Host Community training materials (here)
Dengue	<ul style="list-style-type: none"> WASH Sector Dengue Outbreak and Resources (here) WHO global Guideline on Dengue Response mentioning the recommended chemicals to be used for fumigation (here) WHO Protocol on Dengue/Dengue Fever Detection, Management and Prevention For use among Forcibly Displaced Myanmar Nationals (FDMNs) and Host Population in Ukhiya and Teknaf Upazilas in Cox's Bazar District (here). Chapter 8, pg. 42 highlights vector control and management for dengue prevention.
Monthly Soap Distribution Standard	<ul style="list-style-type: none"> RRRC Approved standard for Monthly Soap Distribution/person (here) A range has been allowed for both laundry (125-150 gm) and bathing soap (100-125gm) and each beneficiary receives 2 bathing soap and 1 laundry soap/month
HP Volunteer Mapping 2022	<ul style="list-style-type: none"> Map (here). 1 Hygiene Promotion Volunteer/200 Household or 1 HP Volunteers/1000 beneficiaries

Updates based on HP TWiG and Technical consultation Meetings (Last Update March 2023)

Topic	Update Details
Lights and Safe access to WASH facilities at night	<ul style="list-style-type: none"> ● Consulted in HP TWiG, WASH Sector and other sectors. Final Document on Lights and Safe access in camps was approved by SAG on 6 February 2023. Lights and Safe Access to WASH facilities in camps ● Lights illuminating access only and not to be installed inside wash facilities.
Menstrual Hygiene Management	<ul style="list-style-type: none"> ● WASH Sectors minimum standard for MHM kit was finalised and approved by SAG on 6 February 2023 (here) ● 6 Laundry soaps, 4m² of cloth or 6 reusable pads and 3 pants (small, medium, and large size)/6months for menstruating women
Waste Management	<ul style="list-style-type: none"> ● SDC Study sharing that outlined household (HH) collection generates better segregated waste compared to communal collection. However, waste collection through HH (40kg/volunteer/day) is lesser in quantity compared to communal collection (80 kg/Volunteer/day). Difference in cost is quite similar for HH collection BDT 133 compared to BDT 158 for communal collection. Oxfam study had similar finding too for HH collection. ● Following technical consultation meeting on 14 March 2023 3 Key messages were agreed- <ol style="list-style-type: none"> 1. No littering anywhere including drains, latrines, around your surroundings, learning centres, market 2. Segregate your organic and inorganic waste in colour coded bins 3. Clean your surrounding and dispose the waste either in designated area or keep it aside for your waste collector volunteer.
Prior assessment before distributing WASH NFI (e.g. Water container)	<ul style="list-style-type: none"> ● There was a discussion on beneficiaries storing water past 24 hours in the HP TWiG, one possible reason for that was assumed to be distribution of excess number of water container. World Vision study proved it where 46% respondents in the camps had more than 5 water containers. Therefore, random distribution of WASH NFI is discouraged without any prior assessment
Recommendations on Bathing Facilities	<ul style="list-style-type: none"> ● Keep your bathing facility hygienic, clean, and dry regardless of location (communal or informal household bathing facilities) ● Ensure proper drainage from the space. ● Refrain from using this space for defecation.
