## Proportional Morbidity

Acute Respiratory Infections (25.5%), Injury and wounds (2.9%), and Acute Watery Diarrhoea (2.7%), were the diseases and health conditions with the highest proportional morbidity this week.

## Upsurges/Outbreak

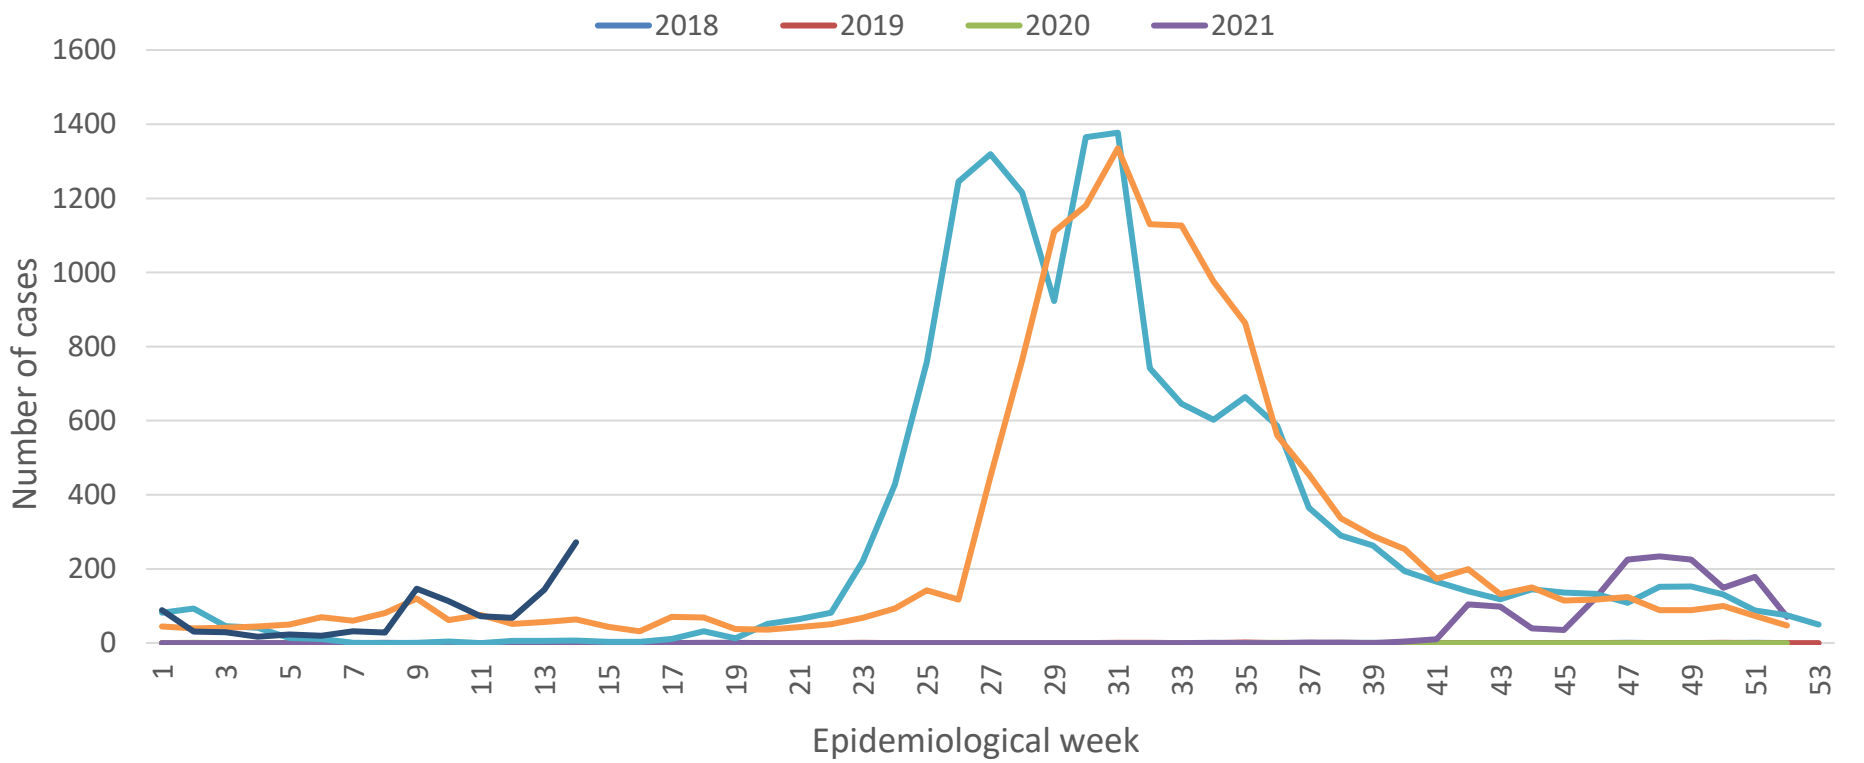

- There have been three (3) lab-confirmed measles cases so far recorded in camps 7, 14 and 22 in 2024
- Additionally, COVID-19, Dengue, and Diphtheria transmission are largely under control.
- Transmission of AWD and suspected Cholera cases has been low partially because there hasn't been Cholera culture detection since 31 August 2023 and reduced transmission. WHO working with the field IEDCR lab to revitalize this in May 2024.

WHO and the Ministry of Health and Family Welfare gratefully acknowledge all partners who have reported the data used in this bulletin.

The data been collected with support from the EWARS project. This is an initiative to strengthen early warning, alert and response in emergencies. It includes an online, desktop and mobile application that can be rapidly configured and deployed in the field. It is designed with frontline users in mind, and built to work in difficult and remote operating environments. This bulletin has been automatically published from the EWARS application.
