MAP INFORMATION

What this map shows

Block Criticality Index: each of the 182 blocks in the 33 camps gets a score from 0 to 100 that combines five indicators, each rescaled from 0 (best block) to 100 (worst block).

Weights: landslide exposure 35% (share of shelters in a moderate-or-higher zone); flood exposure 22% (share of shelters at flood risk); congestion 18% (space per person, inverted, limited to the 5th–95th percentile); block population 15% (July 2026); communal facilities exposed to landslide or flood 10%.

Watchlist bands rank all 182 blocks together: **A** = ranks 1–15; **B** = 16–40; **C** = 41–91 (rest of the upper half); **D** = 92–182 (lower half).

The index shows relative priority within the response, not absolute risk. Weights are a sector judgement and may be revised.

• All 28 blocks on this sheet are in band D: no Teknaf block ranks in bands A–C. Landslide exposure, the largest weight, is low here, but flood exposure is high (65% of shelters at flood risk).

• Camps 21 and 22 (Teknaf upazila) are shown on the Ukhiya & Teknaf sheet.

Data sources

Index: SCCCM JRP 2027 Master Data Analysis workbook, *Block_Critical_Watchlist* (October 2026), built from the block-level hazard summary and July 2026 population.

Hazard classes: Shelter-CCCM Block-Level Hazard Risk, Shelter and Communal Facility Summary (182 blocks, 33 camps), sector master data 2026.

Population: Shelter-CCCM sector master data, July 2026 (1,168,006 people in 33 camps).

Boundaries and base map: UNHCR, IOM, RCP, BBS (administrative boundaries); © OpenStreetMap contributors.
