SAM Admission Progress and Trend 2024 to 2026 (Jan-Sep)

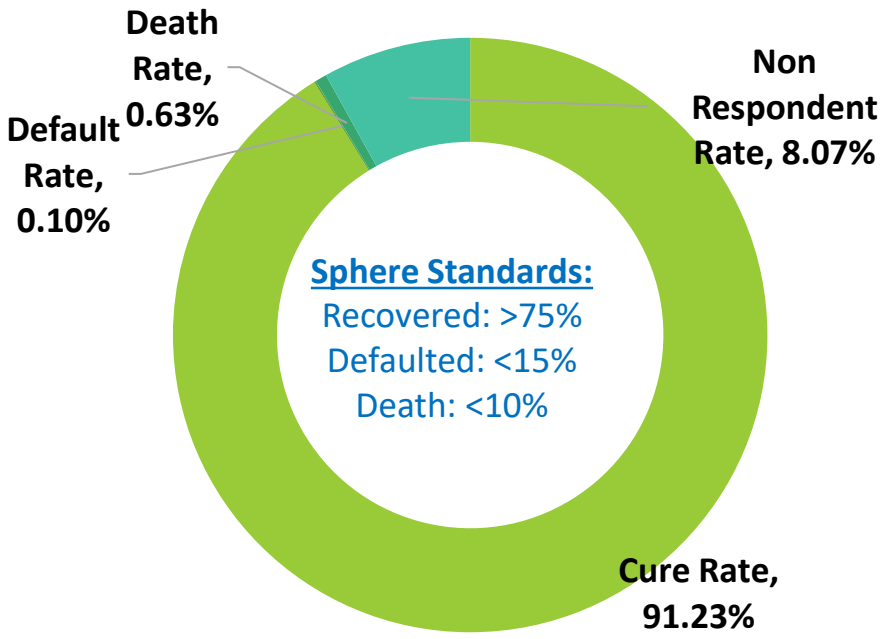

Yet to reach

10,162 Reached out of 14,500 Targeted

Despite low pick in admission at the beginning of 2026, overall admissions increased by 6% in 2026 among children 6-59 months compared to the same period in 2025

SAM KPI Analysis: Jan-Sep 2026

Total Cured – 8,845

ALOS – 66.09

AWG – 3.23

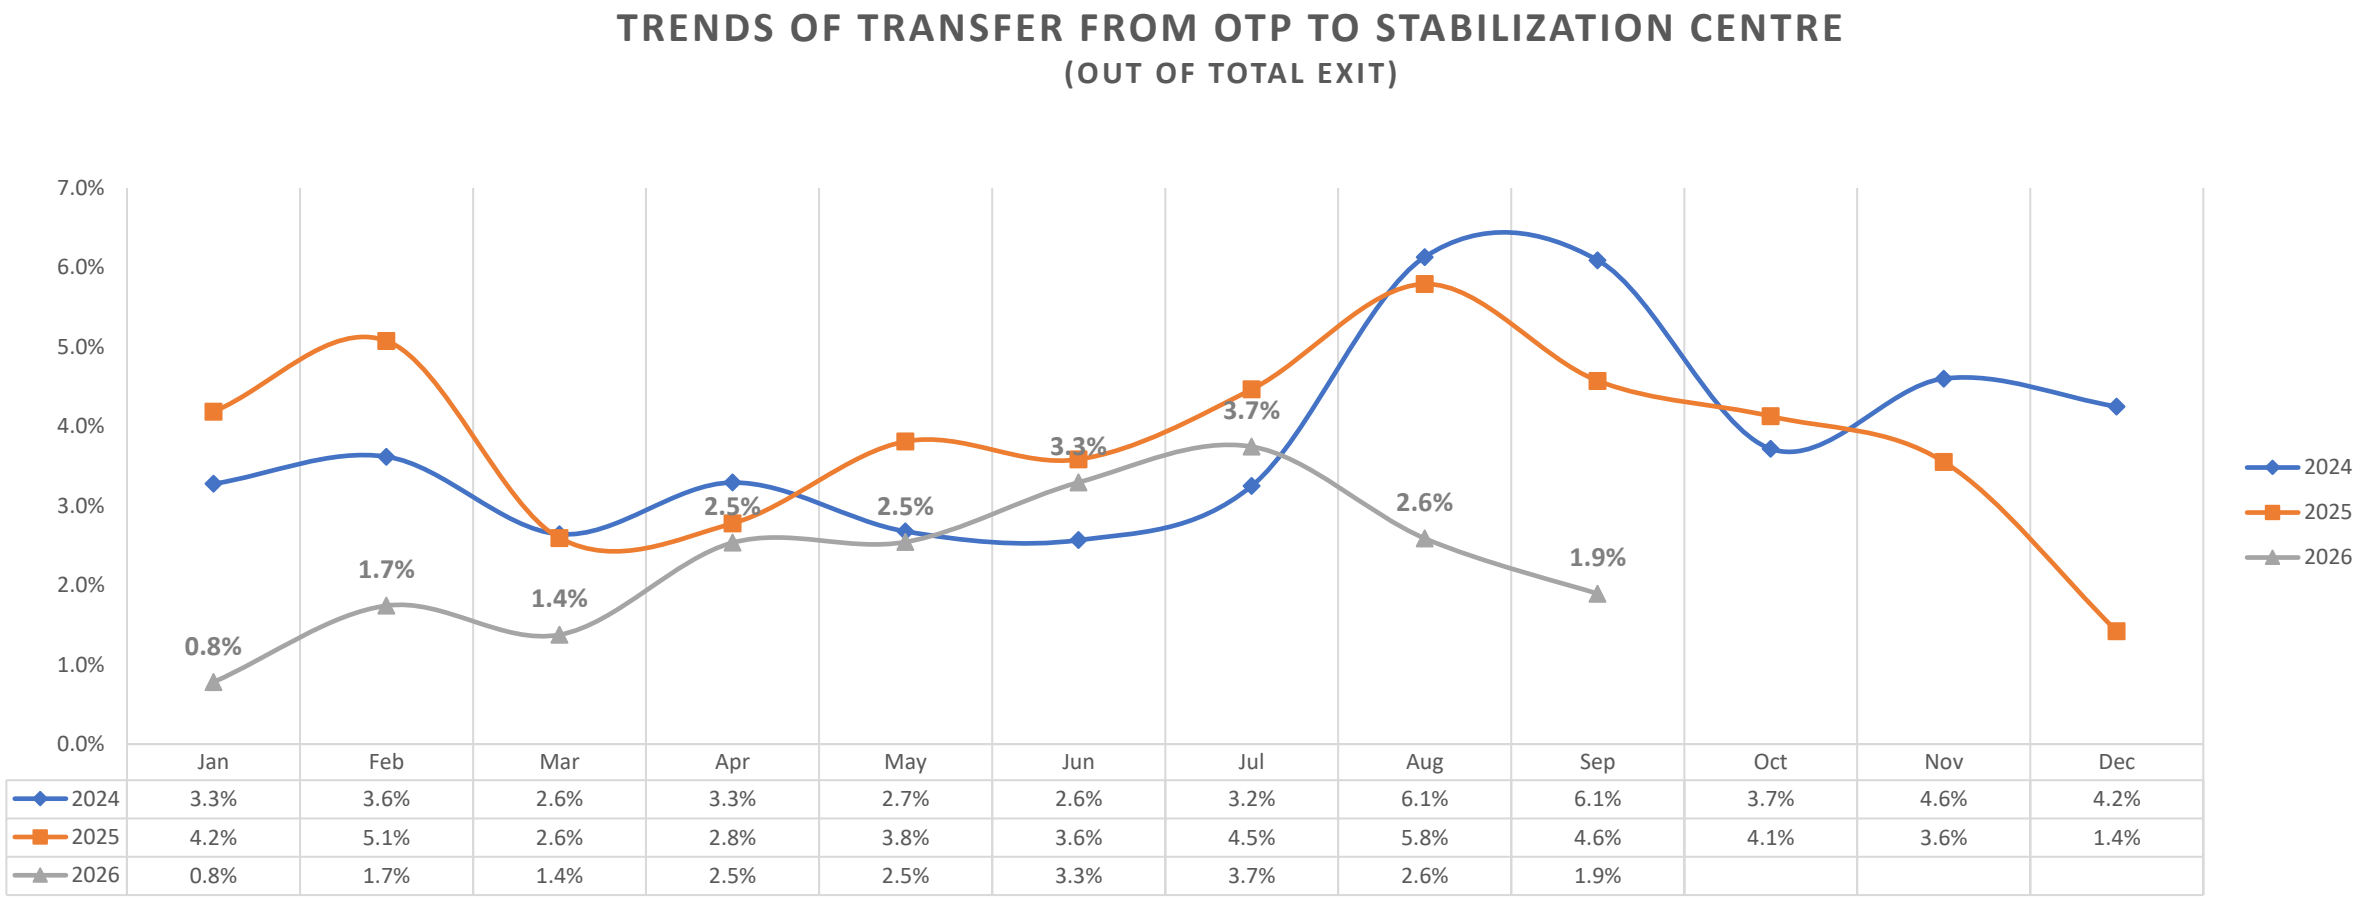

Relapse– 0.4%

Adapted Threshold for CXB

Average weight Gain (g/kg/day)	Category
≥4.0	Excellent
3.5 to <4.0	Good
3.0 to <3.5	Acceptable
2.5 to <3.0	Poor
<2.5	Very poor

- ✓ A **high cure rate** and **very low death and default rates** indicate a **high-quality SAM management program**.
- ✓ The **non-respondent rate** is notable—it shows some children didn't improve despite treatment, which may require further investigation (e.g., underlying illnesses, late admission, or poor treatment adherence).
- ✓ **ALOS of 66 days which is common here in Rohingya response** but also indicates a bit of higher days under therapeutic programme (typically 30 to 40 days in SPHERE Handbook Standard 2000 & 2004)
- ✓ Average weight gain is on **acceptable range** based on the contextualized data driven guideline developed by CMAM TWG this year.
- ✓ Relapse rate of 0.4% reflects a **highly effective program and strong post-discharge monitoring**. In fact, when relapse rates dip below 2%, such rates are considered **exceptional** and represent high-quality, sustainable SAM treatment outcomes.
